BIX-F9 Advanced cervical change and the relationship of the birth canal model

Shanghai Chinon Medical Model & Equipment Manufacturing Co.,Ltd.

Ada Med Supply Limited

BIX-F9 Advanced cervical change and the relationship of the birth canal model

Features:

1. This set of models consists of six modules with different relationships between cervical changes and the birth canal;
2. This set of models shows the dilation size of the cervical ostium, the degree of changes in the cervical canal, and the positional relationship between the fetal head and the ischial spine plane for cervical examination;
3. Changes in various parts during the expansion period of the first stage of labor:
 - 1) Stage 1: The cervix does not dilate, the cervical canal does not disappear, and the relationship between the fetal head and the ischial spine plane is -5.
 - 2) Stage 2: The cervix is dilated 2cm, the cervical canal disappears 50%, and the relationship between the fetal head and the ischial spine plane is -4.
 - 3) Stage 3: The cervix is dilated 4cm, the cervical canal has completely disappeared, and the relationship between the fetal head and the ischial spine plane is -3.
 - 4) Stage 4: The cervix is dilated 5cm, the cervical canal has completely disappeared, and the relationship between the fetal head and the ischial spine plane is 0.
 - 5) Stage 5: The cervical opening is dilated 7cm, the cervical canal has completely disappeared, and the relationship between the fetal head and the plane of the ischial spine is +2.
 - 6) Stage 6: The cervix is dilated 10cm, the cervical canal has completely disappeared, and the relationship between the fetal head and the plane of the ischial spine is +5.
